EXAMINER'S AMENDMENT

Acknowledgment is made of the response filed on 12/19/05. Claims 21-39 are currently pending.

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Wiberg on 2/08/06.

The application has been amended as follows:
substitute the abstract with the following:

-- ABSTRACT OF THE DISCLOSURE

Modular, portable data collection terminals are disclosed for use in mixed wireless and hard-wired RF communication networks, wherein various radio transmitter modules and associated antennas may be selectively added to a base terminal unit to solve networking problems associated with specific types of business environments. Modularity exists in both the hardware (splitting data collection and processing control circuitry from radio transceiver control circuitry) and software (splitting transceiver specific, lower level communication protocol from generic, higher level communication protocol). The control circuitry, including associated microprocessors devices, interact to selectively activate communication circuits to perform necessary communication or data processing functions and enter and remain in a power-saving dormant state during other times. To support such dormant or "sleeping" states, a series of communication protocols provide for channel access to the communication network. --

IN THE CLAIMS:

in claim 31, line 1, substitute "1" with --21--.

Allowable Subject Matter

2. Claims 21-39 are allowed.

3. The following is an examiner's statement of reasons for allowance: prior art of record prior to a priority date of at least August 31, 1993 fails to teach, or fairly suggest either alone or in combination thereof, a portable terminal and a system for use in a portable terminal utilizing a communication protocol stack having higher and lower layer wherein:

a memory is adapted to store the higher layers of the communication protocol stack; and

a processor is adapted to perform the functionality of the higher layers of the communication protocol stack stored in the memory.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
